

## Transportable Turnkey Cases

This is an upgrade option to convert any system to a complete transportable solution. When you choose this option, we will take your new or existing system and rack mount all of your components in a sturdy 'rack case' with retractable handles and wheels. We then completely pre-configure and pre-wire your system, which greatly enhances the ease of use and operation of your system. Virtually no training is required. Operation is as simple as turning on a light switch. Simply open the front and rear access panels plug in the master power cord and the system is ready to use. The Turnkey option can be customized to accommodate up to 8 languages and up to 16 wireless microphones along with monitoring units and customized utility drawers.

PICTURE: Two language VP-T100 system with two wireless microphones  
Prices range from \$389.00 - \$589.00+ depending on configuration
