

Bigger Better Lighter

The LB200 is the new standard for portable applications. The LB200 is designed to allow your interpreters to sit comfortably on any standard 6-foot table allowing enough room to easily access their interpreting consoles, microphones, laptops and meeting materials. The LED lights allow for a convenient dimmable light source.

The LB200 includes:

- No tools required with our patented easy to setup Snap & Slide® system
- 6 panel window panels (providing 160° viewing angle)
- Side panels are designed to protrude over table creating an overhang for enhanced sound baffling
- 2 LED Littlite booth lights with 18" gooseneck
- Special sound-baffling composite material
- Lightweight design of only 85 lbs including transport case allowing booth able to be shipped via courier services like FedEx, UPS and DHL standard services rates
- interior partition panels available for custom configurations
- Custom configurations available

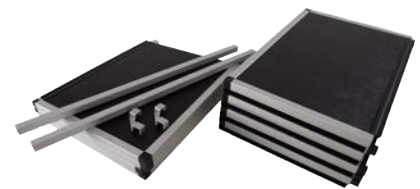

There are currently two LB series booths:

- LB200 Two-person Tabletop Booth (pictured here)
- LB100 One-person Tabletop Booth

With advance sound baffling materials, the LB series booths provide the best voice reduction of any booth available on the market. The booths help isolate the interpreters from ambient noises that may cause interruption of their concentration. The LB series travel cases are (available separately) rugged transport ready style cases.

MSRP \$2,791.00

The LB200 by Tages-Audio is manufactured and available through Lexicon-Global exclusively.

Snap & Slide System

Case includes rugged handles and wheels

Transport Case (30"x18"x15") - *Optional*
