Customized 4 Language System w/Network Recording

DN-700R network SD/USB audio recorder.
Each unit will record two languages (Language A on Left-Track & Language B on Right-Track). The DN-700R records WAV and MP3 audio files to solid state media storage drives including SD/SDHC and USB. File transfer is easily accessible by automatically uploading your audio files onto your networks via FTP or local computer.

The DNR-700R's are network-based units, that allow you to easily operate and/or program the unit for scheduled recordings and transfers automatically by designating FTP destinations easily - eliminating the need for on-location media retrieval or manual transfers to standalone computers.

T45N Network FM Transmitters
Interpreters microphones are pre-wired through the custom patch-bay as seen here. We pre-wire each transmitters output directly to the corresponding DN700R's inputs. The cutting-edge T45Net transmitter offers network-control or monitoring capability from any remote location or on your local network. An OLED high-resolution screen with easy-to-manage menu navigation conveniently located on front panel. With a range of up to 1000 feet, the T45Net is ideal for large venues where superior coverage is essential.
